

REAL TIME QUALITY IMPROVEMENT

CARE GAP OPPORTUNITIES IN A TYPICAL DAY

REAL TIME ANALYSIS OF QUALITY SCORES

COMMON: ANNUAL MEASUREMENT

Many organizations measure quality once a year, leaving little opportunity to improve performance.

BETTER: QUARTERLY REVIEWS

Even mature organizations are often hampered by 90-day lages in claims data, reducing measurement frequency.

BEST: REAL-TIME VISIBILITY

With EHR data, measure performance every week for actionable interventions and "sticky" behavioral changes.
